WhatsApp is a program used to communicate with contacts. Supports voice notes, pictures, videos, documents, and more. It's a great way to avoid annoying values for text messages. WhatsApp kicks text messages into the curve and embraces communication over the Internet. WhatsApp provides a simple platform to talk to friends when there is a distance between you and them. When you don't have your mobile phone handy, the version for Windows is a great replacement. It requires your phone to be connected to the Internet, but, other than that, it works like a charm. The application is filled with a ton of features. Some alternatives, such as LINE, have a lot in common. Sending pictures, voice notes, and documents is just a few. However, WhatsApp enhances the list by adding items such as location sharing, encrypted messages, video calls, and business profiles. Starting with the program is easy. All you have to do is open the app on your phone and place it in a QR code provided by the Windows version. That's it, that's it. You're ready to start using one of the best communication apps. Something slightly frustrating is that other competitors are getting one thing right. Telegram, for example, doesn't force you to keep your phone connected. So when your phone runs out of battery or is lost, you're really out of luck with WhatsApp. This program still finds a way to top the charts as one of the most downloaded applications in the world. Where can you run this program? It can run in Windows 7 and later. It is also available for Android, iPhone, Mac.Is there a better alternative? WhatsApp has everything you need. Telegram, however, provides better security options. WhatsApp is just fantastic. It offers everything you need to keep in touch with your friends and loved ones. Should I download it? Yes. It is lightweight, easy to use, and works very well. You want to download it if you need a free way to communicate with anyone in the world. You'll no longer have to download videos to WhatsApp to watch them — the app comes with an easy-to-use new feature that lets you broadcast videos while the video is being downloaded to your device. After just a few weeks of testing in India, the feature has gone live for all Android WhatsApp users. One of the main issues with WhatsApp has long been how it handles video and the new feature should help make videos on WhatsApp much more convenient and hit a few seconds of standby time between sending a video and being on to watch that video. The new streaming feature works in many ways. If you've set up your app to automatically download media when you receive it, the message will start downloading to your device on arrival and you'll see the progress counter at the bottom left of the screen as usual. Now, however, even before the video has been downloaded, you will be able to start watching it. Then, once the download is complete, the progress bar will be replaced with a video duration indicator. However, if you do you've set up the app to automatically download media, you'll still see the play button, and you'll be able to stream the video when it arrives, but it won't actually download automatically to your device. For this to happen, you must press the download button in the lower-left corner of the screen. WhatsApp has traditionally been a little slow in implementing new features. However, in recent months this seems to have changed a little. In October, for example, it added the ability to video contacts, a feature that had long been requested. In addition, the WhatsApp update for Android also provides users with animated GIF support. This means that you can now send a GIF via the file attachment button, and in addition, you can even edit it in advance (or at least, crop). And if you're particularly proud of a particular GIF, WhatsApp now provides you with an Animated GIF folder where you can save your favorites. Download the latest version from the Google Play Store. Article originally published in November. Updated on 12-6-2016 by Lulu Chang: Added news that the feature has now gone live. Recommendations Editors WhatsApp is one of the most popular messaging apps around and while the device you have, chances are you'll be able to download it. In fact, you may well be able to download it on multiple devices so you can get your messages anywhere. Doing so is a simple process, but varies depending on whether you're using an iPhone, Android, Windows or Mac, which is where this guide comes in. Below you will find step-by-step instructions for downloading WhatsApp to all of the above devices, as well as a guide to using WhatsApp Web.How to send GIFs to WhatsApp on Android and iOSHow can I download WhatsApp to iPhone? To download WhatsApp to an iPhone, just open the App Store, type WhatsApp in the search and it should appear. The full title of the app is 'WhatsApp Messenger' and is made by 'WhatsApp Inc', so make sure it's what you download. Once you find it, press 'Get' as you would to download any other application and the download will start. Or, if you go to whatsapp.com/dl in a browser on your phone, you'll go directly to the App Store listing. Once downloaded, start it and follow simple setup instructions, which include accepting terms and conditions and verifying your phone number (which simply includes entering it and waiting for a text message). If you have previously used WhatsApp and have a backup of your data, then you will also be asked if you want to restore it. In you'll be ready to start messaging. Note that you need iOS 8 or later for WhatsApp to work. Download WhatsApp to your iPhoneHow can I download WhatsApp to Android? The process on Android is very similar to iOS and as with iOS there are two ways to download WhatsApp. One is to open Google Play, type WhatsApp in the search bar and search for WhatsApp Messenger from WhatsApp Inc. Tap this, tap install and to appear on your phone. The other way to do this is to go whatsapp.com/dl to your phone's browser. This will redirect you directly to the Google Play listing, where you can simply click 'install'. Once installed, start it, accept the terms and conditions, enter your phone number so the app can verify it, and follow any other steps that may include restoring from a backup if you've used WhatsApp before. Note that you need an Android version over 2.3.7 to create a new WhatsApp account (i.e. if you've never used WhatsApp before), and Android 2.3.3 or later to download WhatsApp. You should also use a phone, not a tablet. Download WhatsApp to your android phoneHow can I download WhatsApp to Windows? To get WhatsApp for Windows, head to whatsapp.com/download and press the download for Windows button. Once downloaded, open the WhatsApp.exe file to install it, then follow the instructions, which include starting WhatsApp on your phone and scanning a QR code (with the scanner found in the > WhatsApp web menu in the WhatsApp phone app). This will then connect your phone's whatsapp up to the computer. Note that this therefore requires WhatsApp to also be installed on your phone for both to stay connected. For example, if you turn off your phone, then your version of Windows won't be able to work until you turn it back on. Do you also need Windows 8.1 or above to use WhatsApp.How can I download WhatsApp to Mac? There are two ways to download WhatsApp to Mac. One is to head to whatsapp.com/download and click on 'download for Mac OS X 10.9 and higher button'. As you will understand from this, you should be using Mac OS X 10.9 or later. This will download a .zip file, which you then need to open to run WhatsApp.app. This will install WhatsApp, during which you will be asked if you want to add it to your application folder and your desktop dock. So I make a decision, then once the whatsapp installation is complete Alternatively, you can go to the WhatsApp desktop list in the mac app store and download it from there. Either way, once installed you will then need to scan a QR code using the phone application (which must also be installed). In iOS 8.1 or later you'll find this QR scanner in Settings > on the WhatsApp Web. WhatsApp on a Mac will only work while WhatsApp is running on your phone, so if you turn off your phone or delete the phone app will stop. How do I use WhatsApp Web? You don't really need to download WhatsApp to use it on your PC or Mac. Instead, you can use whatsapp.com and run it from a web browser. When you get to this page you need to scan a QR code by starting WhatsApp on your phone and heading to menus or settings, then WhatsApp Web, to access the code reader. Once you scan the code, Whatsapp Web will start, complete with all your WhatsApp conversations, so you can chat from your browser.
